The Ceramic Engineering and Science Proceeding has been published by The American Ceramic Society since 1980. This series contains a collection of papers dealing with issues in both traditional ceramics (i.e., glass, whitewares, refractories, and porcelain enamel) and advanced ceramics. Topics covered in the area of advanced ceramic include bioceramics, nanomaterials, composites, solid oxide fuel cells, mechanical properties and structural design, advanced ceramic coatings, ceramic armor, porous ceramics, and more. This book analyses state-of-the-art techniques in business process management as drivers of advanced entrepreneurship, financial management, supply chain management, and sustainability management. The role of management in a rapidly-changing environment and the use of innovative methods and techniques to address and solve key management problems are also explored. This tutorial contains written versions of seven lectures on Computational Combinatorial Optimization given by leading members of the optimization community. The lectures introduce modern combinatorial optimization techniques, with an emphasis on branch and cut algorithms and Lagrangian relaxation approaches. Polyhedral combinatorics as the mathematical backbone of successful algorithms are covered from many perspectives, in particular, polyhedral projection and lifting techniques and the importance of modeling are extensively discussed. Applications to prominent combinatorial optimization problems, e.g., in production and transport planning, are treated in many places; in particular, the book contains a state-of-the-art account of the most successful techniques for solving the traveling salesman problem to optimality. This collection contains a selection of the most important contributions to semantic theory ranging from Gottlob Frege's essay 'On Sense and reference' written in 1892 to present-day thinkers in the field. Jan Wolenski and Sandra Lapointe Polish philosophy goes back to the 13th century, when Witelo, famous for his works in optics and the metaphysics of light, lived and worked in Silesia. Yet, Poland ' s academic life only really began after the University of Cracow was founded in 1364 – its development was interrupted by the sudden death of King Kazimierz III, but it was re-established in 1400. The main currents of classical scholastic thought like Thomism, Scottism or Ockhamism had been late – about a century – to come to Poland and they had a considerable impact on the budding Polish philosophical scene. The controversy between the via antiqua and the via moderna was hotly 1 debated. Intellectuals deliberated on the issues of conciliarism (whether the C- mon Council has priority over the Pope) and curialism (whether the Bishop of Rome has priority over the Common Council). On the whole, the situation had at least

two remarkable features. Firstly, Polish philosophy was pluralistic, and remained so, since its very beginning. But it was also eclectic, which might explain why it aimed to a large extent at achieving a compromise between rival views. Secondly, given the shortcomings of the political system of the time as well as external pressure by an increasingly hegemonic Germany, thinkers were very much interested in political matters. Poland was a stronghold of political thought (mostly inclined towards conciliarism) and Polish political thought distinguished itself in Europe.

Gain a deeper understanding of essential research on the semantics of noun phrases and verb phrases. Clear explanations of significant recent research bring complex issues to life, with expert guidance on topics of debate within the field. The book gives readers valuable insights into topics such as definiteness, specificity, genericity aspect, aktionsart and mood. It also discusses directions for future research. Written by a world-class team of authors, these highly cited articles are here in paperback for the first time since their original publication. An essential reference for researchers in the area.

Barry Schein proposes combining a second-order treatment of plurals with Donald Davidson's suggestion that there are positions for reference to events in ordinary predicates in order to account for several of the more puzzling features of plurals without invoking plural objects, with its attendant metaphysics, and also provide an absolute truth-theoretic characterization of the semantics of sentences with plurals in them. How do we make sense of sentences with plural noun phrases in them? In *Plurals and Events*, Barry Schein proposes combining a second-order treatment of plurals with Donald Davidson's suggestion that there are positions for reference to events in ordinary predicates in order to account for several of the more puzzling features of plurals without invoking plural objects, with its attendant metaphysics, and also provide an absolute truth-theoretic characterization of the semantics of sentences with plurals in them. Schein's highly original argument should have significant impact on how natural-language semantics is done, with repercussions for philosophy and logic. The book opens with foundational arguments that the logical language should have four major features: reduction to singular predication via a Davidsonian logical form, mereology of events, a logical syntax that allows the constituents of a Davidsonian analysis to be predicated of distinct events and separated from one another by other logical elements, and descriptive anaphors that cross-refer to the events described by antecedent clauses. A semantics for plurality and quantification is developed in the remaining chapters, which address some of the empirical and formal questions raised by the variety of interpretations in which plurals and quantifiers participate. This volume covers a broad spectrum

of research into the role of events in grammar. It addresses event arguments and thematic argument structure, the role of events in verbal aspectual distinctions, events and the distinction between stage and individual level predicates, and the role of events in the analysis of plurality and scope relations. It is of interest to scholars and students of theoretical linguistics, philosophers of language, computational linguists, and computer scientists. This 2004 book represents a multidisciplinary collaboration that highlights the significance of Mikhail Bakhtin's theories to modern scholarship in the field of language and literacy. Book chapters examine such important questions as: What resources do students bring from their home/community environments that help them become literate in school? What knowledge do teachers need in order to meet the literacy needs of varied students? How can teacher educators and professional development programs better understand teachers' needs and help them to become better prepared to teach diverse literacy learners? What challenges lie ahead for literacy learners in the coming century? Chapters are contributed by scholars who write from varied disciplinary perspectives. In addition, other scholarly voices enter into a Bakhtinian dialogue with these scholars about their ideas. These 'other voices' help our readers push the boundaries of current thinking on Bakhtinian theory and make this book a model of heteroglossia and dialogic intertextuality. This handbook comprises, in three volumes, an in-depth presentation of the state of the art in linguistic semantics from a wide variety of perspectives. It contains 112 articles written by leading scholars from around the world. These articles present detailed, yet accessible, introductions to key issues, including the analysis of specific semantic categories and constructions, the history of semantic research, theories and theoretical frameworks, methodology, and relationships with related fields; moreover, they give expert guidance on topics of debate within the field, on the strengths and weaknesses of existing theories, and on the likely directions for the future development of semantic research. In many cases, the articles written for this handbook promise to become the standard references on the topics they cover. This work will provide an essential reference for both advanced students and researchers in semantics and related fields within linguistics, psychology, philosophy, and other areas. This book presents state-of-the-art intelligent methods and techniques for solving real-world problems and offers a vision of future research. Featuring 143 papers from the 4th Future Technologies Conference, held in San Francisco, USA, in 2019, it covers a wide range of important topics, including, but not limited to, computing, electronics, artificial intelligence, robotics, security and communications and their applications to the real world. As such, it is an

Excerpt from Comparative Religion, Its Method and Scope: A Paper Read (in Part) At the Third International Congress of the History of Religions, Oxford, September 17, 1908

A difficult problem has been confronting students of religion for a considerable period, and the embarrassment of the situation has been steadily growing. If we shall find ourselves able to reach and register a verdict, or if our present discussion should succeed only in making more clear the principles that underlie a widely prevalent diversity of opinion, we shall assist in removing an issue by which many are still perplexed, and in lending impetus to a line of inquiry that desires and deserves our help. To me, it is a source of unbounded satisfaction that room has been made in our programme, this year, for several papers that deal expressly with Comparative Religion. One reader has chosen for his subject 'A Science of Comparative Religion,' and I know in advance that he is going to bring us an affirmative answer to that query. It has long been one of my dreams that I might yet see this vast and expanding department of investigation accorded that place and prominence to which it is entitled. The action of the Executive Committee of this Congress - their courageous new departure, reference to which has already been made - cannot fail to contribute materially towards the realization of this hope. Further subdivision of the work undertaken by these quadrennial conferences will eventually follow, with results of the very first importance for the prosecution of our studies.

I. The Methods and Scope of the Science of Religion. - It is desirable that, for a moment, we should make a retrospective glance. Let us recall, as a preliminary step, the methods and scope of the Science of Religion. It is essential that one

or two of the considerations which such a survey suggests should be clearly borne in mind. By 'The Science of Religion' we mean that increasing group of studies, diverse yet closely interrelated, by which man is seeking to unravel the mystery of his religious acts and aspirations. In particular, the Science of Religion is the product of the deliberate investigation of the facts of religion - and of all the facts, whatever their relative age, number, or consequence - when these data are dealt with in accordance with some clearly defined scientific method. These methods have varied very greatly, and naturally they have been applied with varying degrees of proficiency. With the turn of the century our ability to collect and store geospatial information has increased considerably. This has resulted in ever-increasing amounts of heterogeneous geospatial data, an issue that poses new challenges and opportunities. As these rich sources of data are made available, users rely, now more than ever, on the geospatial data infrastructure. The availability and accessibility of such data, as well as the ability to effectively manage, model, index and query the data is becoming a cornerstone in numerous applications. Moreover, the ability to formalize and represent data is becoming key to integration and interoperability. With the introduction of distributed geospatial data infrastructure and the implementation of web-based services, the impact of such issues is becoming even more evident. Inspired by these challenges, this book on Next Generation Geospatial Information offers a collection of original contributions from leading experts in spatial information modeling, image processing and analysis, database management, ontologies and data mining. It provides a unique insight into the current state-of-the-art and future challenges in geospatial information through four thematic chapters, each of which represents a primary research theme, namely distributed spatial infrastructure, image-based geospatial information management, indexing and querying geospatial databases, and ontology and semantics for geospatial data. International Library of the Philosophy of Education reprints twenty-four distinguished texts published in this field over the last half-century and includes works by authors such as

Ore extraction through surface and underground mining continues to involve deeper excavations in more complex rock mass conditions. Communities and infrastructure are increasingly exposed to rock slope hazards as they expand further into rugged mountainous terrains. Energy needs are accelerating the development of new hydroelectric dams and exploit "We are invited to think about the now ubiquitous everyday practices of interpreting and producing narratives across a range of modalities. The result is a text that inspires readers to think in new ways about narratives, invites them to analyse narrative texts available on the Web and, for those who wish, suggests how best to employ specialist software." - Ann Phoenix, Institute of Education, University of London "It ' s high time we have a book like this. Brian Alleyne has managed to produce the best, clearest, and most comprehensive overview of narrative theory for social scientists I have yet to see. I wish I ' d had access to a book like this when I was a student. It would have made my life so much easier. It will surely become the universally recognised go-to book on the subject." - David Graeber, London School of Economics & Political Science Narrative is a fundamental means whereby we make sense of our own lives and of the world around us. The stories we tell, and are being told, shape our identities, relationships and world-views. In a rapidly changing digital society where blogging and social networking have become fundamental communication channels, the platforms for the creation and exchange of all kinds of narratives have greatly expanded. This book responds to the dynamic production and consumption of stories of all kinds in popular and academic cultures. It offers a comprehensive discussion of the underlying philosophical and methodological issues of narrative and personal narrative research as well as applying these to the current digital landscape. The book provides practical guidance on data management and use of software for the narrative researcher. Illustrated with examples from a range of fields and disciplines as well as the author ' s own work on hacking cultures and cultural activism, this title is a must for anyone wanting to learn about narrative approaches in social research and how to conduct successful narrative research in a digital age. The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions

look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts. Political elites in liberal democracies are showing heightened concern about threats to national security from the overseas political activities of the People ' s Republic of China (PRC) and its supporters. This Whitehall Paper argues that an effective liberal democratic policy response requires careful disaggregation of distinct sets of risks: to national security; civil liberties; and academic freedom. Although widely cited as a model to follow, Australia ' s response to these issues illustrates how aggregation of these diverse risks into a singular national security threat – commonly labelled ' Chinese influence ' – can produce alarmist public policy discourse, legislative overreach and mismatched institutional responsibilities. The Paper suggests a set of measures for liberal democracies to manage their engagement with China ' s powerful and increasingly authoritarian party-state.

This book reports on current challenges in bridge engineering faced by professionals around the globe, giving a special emphasis to recently developed techniques and methods for bridge design, construction and monitoring. Based on extended and revised papers selected from outstanding presentation at the Istanbul Bridge Conference 2018, held from November 5 – 6, 2018, in Istanbul, Turkey, and by highlighting major bridge studies, spanning from numerical and modeling studies to the applications of new construction techniques and monitoring systems, this book is intended to promote high standards in modern bridge engineering. It offers a timely reference to both academics and professionals in this field.

Indoctrination is an important concept in educational philosophy. It bears on many areas of study, including ethics, epistemology and philosophy of science, and opens up new paths of investigation into such questions as classroom method and the rights of parents and their children. This book brings together a number of key articles which discuss indoctrination in relation to aspects of religion and morals, doctrines and moral responsibility. This volume combines both American and English interpretations of a crucial

idea in the philosophy of education and helps bridge the gap between the teaching of the subject in the USA and the UK. This book provides insights into the 3rd International Conference on Communication, Devices and Computing (ICCDC 2021), which was held in Haldia, India, on August 16–18, 2021. It covers new ideas, applications, and the experiences of research engineers, scientists, industrialists, scholars, and students from around the globe. The proceedings highlight cutting-edge research on communication, electronic devices, and computing and address diverse areas such as 5G communication, spread spectrum systems, wireless sensor networks, and signal processing for secure communication, error control coding, printed antennas, analysis of wireless networks, antenna array systems, analog and digital signal processing for communication systems, frequency selective surfaces, radar communication, and substrate integrated waveguide and microwave passive components, which are key to state-of-the-art innovations in communication technologies. A beginner's guide to the ins and outs of gunsmithing from a professional gunsmith. When it was first published in 1938, *Elementary Gunsmithing* was one of the few books of the time to address an amateur audience, among more advanced titles. With clear, engaging, and instructional prose, Frazer takes beginner firearm interest to the next level by talking the reader through the fundamentals of gunsmithing, such as what tools are necessary for the craft, how to solder and mount parts, and even how to conduct a fledgling gunsmithing business. He specifically addresses the “young man who likes working at the bench,” and similarly the book reflects the spirit of innovation, resourcefulness, and do-it-yourself work. While the book may not cover contemporary firearms, it offers a grandfatherly, old-school instructional vibe with accurate information about guns up to the 1940s. Frazer focuses on gunsmithing with ordinary hand tools at the work bench, rather than complicated machinery. These helpful tips and information, which are still applicable today, make *Elementary Gunsmithing* a useful, classic, and historically significant reference for both amateurs and budding gunsmiths keen on building a full-time business. Skyhorse Publishing is proud to publish a broad range of books for hunters and firearms enthusiasts. We publish books about shotguns, rifles, handguns, target shooting, gun collecting, self-defense, archery, ammunition, knives, gunsmithing, gun repair, and wilderness survival. We publish books on deer hunting, big game hunting, small game hunting, wing shooting, turkey hunting, deer stands, duck blinds, bowhunting, wing shooting, hunting dogs, and more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to publishing books on subjects that are sometimes overlooked by other

publishers and to authors whose work might not otherwise find a home.
